

# A suitable and outstanding Cache Algorithm

S2LazyQueue + LRU

# A suitable and outstanding Cache Algorithm

S2LazyQueue + LRU

# to quarter

## Data Preparation

The proper test data can reproduce the online queries.

**Data requirement:**

- cn130
- calculate hash\_value of every query
- consistent hash to 124.160.136.201:81

SUMMIT

**Test environment:**

- simulate 4.8TB disk space
- memory usage: 10G

The proper test data can reproduce the online queries.

### Varied Cache Algorithms

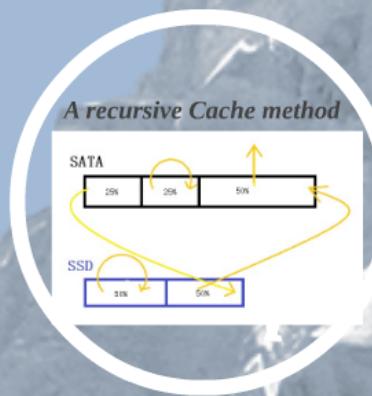

- |                     |            |
|---------------------|------------|
| • Clairvoyant       | • ???      |
| • FIFO              | • 0.800641 |
| • S4LRU             | • 0.831069 |
| • S4LazyQueue       | • 0.825915 |
| • S2LazyQueue       | • 0.812066 |
| • S2LazyQueue + LRU | • 0.836890 |

## *Varied Cache Algorithms*

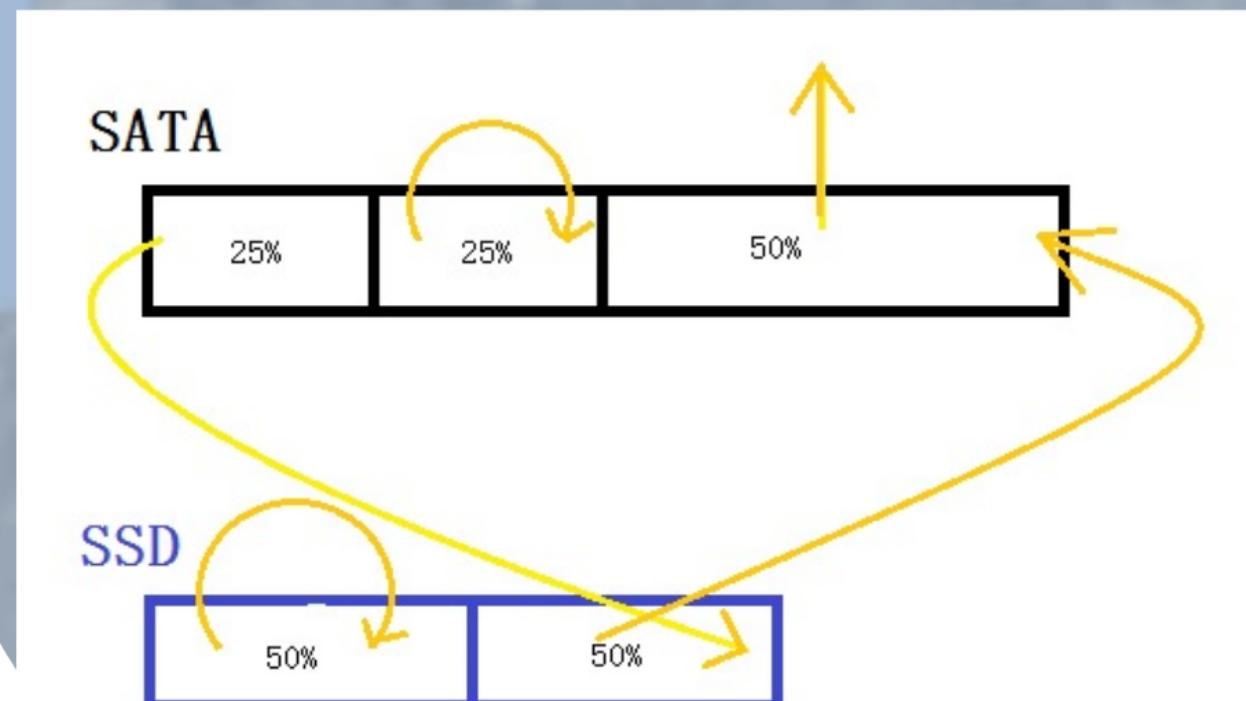

- Clairvoyant
- FIFO
- S4LRU
- S4LazyQueue
- S2LazyQueue
- S2LazyQueue + LRU
- ???
- 0.800641
- 0.831069
- 0.825915
- 0.812066
- 0.836890

- Unit time complexity
- Additional space requirement
- Timely up stair action

# Analyze to S2LazyQueue + LRU

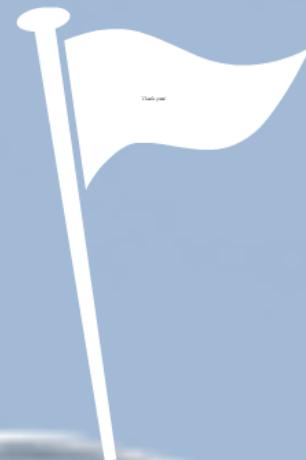

## *A recursive Cache method*

# WIN!

Facing problems:

- Unit time complexity
- Additional space requirement
- Timely up stair action

Thank you!

# A suitable and outstanding Cache Algorithm

S2LazyQueue + LRU
